

ITSM Automation Suite - Project Report

Project Overview

ITSM Automation Suite is a custom ServiceNow application developed using App Engine Studio to automate IT issue management. The application streamlines issue creation, approval for critical issues, status tracking, and reporting.

Objectives

- Simplify IT issue submission
- Automate approval workflow for critical issues
- Track issue lifecycle
- Generate basic reports for issue analysis

Key Features

- Custom IT Issue Table
- Record Producer
- Service Portal
- Flow Designer Automation
- Critical Issue Approval Workflow
- Approval Management
- State Transition (Open → Work in Progress)
- Basic Reports

Technologies Used

ServiceNow Zurich, App Engine Studio, Flow Designer, Service Portal, Reporting.

Workflow

User submits an IT issue → Issue is created → If Priority = Critical, an approval request is generated → Approver approves the request → Issue state changes to Work in Progress.

Testing & Results

Successfully tested IT issue creation, approval workflow, state transition, and report generation.

Future Enhancements

- Dashboard integration
- SLA management
- Email notifications and escalations
- Automatic assignment based on category
